ABOUT US

Aran Tejarat Company

Aran Tejarat Company, with years of experience in the production and distribution of various types of shoes, sandals, slippers, and boots, is considered one of the leading brands in the country's footwear industry. This company, by utilizing modern technologies and a specialized team, produces high-quality products that meet international standards, suitable for various environments such as daily, sports, and industrial use.

The products of Aran Tejarat Company include various types of sneakers, slippers, and sandals, designed and produced for different age groups with diverse designs and colors. Additionally, the company produces various types of industrial and safety boots for specific work environments, designed with high durability and appropriate protective features.

One of the company's strengths is the production of raw materials required for the footwear industry. Aran Tejarat, by producing raw materials such as PVC (Polyvinyl Chloride), PU (Polyurethane), and air blowing, has achieved self-sufficiency in supplying the basic materials for its own production and other manufacturers in this industry. These high-quality raw materials, with special properties such as flexibility, durability, and resistance to wear and heat, are used in the production of high-performance footwear.

As an innovative and customer-centric company, Aran Tejarat is constantly striving to modernize its production processes and offer products that align with market needs. Continuous research and development in product design and optimization are key pillars of the company's activities. Moreover, with a focus on environmental principles in the production of raw materials and final products, the company seeks to minimize its environmental impact.

With an extensive distribution network, Aran Tejarat supplies its products nationwide and in international markets, gaining the trust of both domestic and foreign customers. The company is committed to quality and innovation, continuously striving to maintain its position as one of the top footwear and raw material producers in the region.

The products of Aran Tejarat Company are diverse and designed and produced according to various needs and preferences. These products include sports sneakers, comfortable sandals, everyday slippers, and industrial and safety boots, all made with high-quality raw materials and advanced technologies.

Sports and Casual Sneakers:

The sneakers produced by Aran Tejarat are designed for various sports activities and daily use. These sneakers are made from raw materials such as PVC and PU, known for their high flexibility, durability, and resistance to wear. The ergonomic design of these sneakers ensures comfort and support for the feet throughout the day or during sports activities. Additionally, the use of ventilation systems in the upper part of the sneakers helps keep the feet dry and cool throughout the day.

Comfortable Sandals and Everyday Slippers:

Aran Tejarat produces a wide range of sandals and slippers for use at home, outdoors, and in beach environments. These sandals and slippers, focusing on comfort and lightweight design, are ideal for everyday use. High-quality raw materials such as air blowing and PU are used in the production of these products, ensuring both comfort and durability. The soft and flexible soles of these products reduce pressure on the feet, offering a pleasant experience for users.

Industrial and Safety Boots:

The boots produced by Aran Tejarat are specifically designed for industrial, construction, and agricultural environments. These boots are made from durable materials such as PVC and PU, which are resistant to chemicals, oil, heat, and wear. Safety boots feature characteristics like steel toe caps, anti-slip soles, and resistance to water and electricity, making them an ideal choice for workers in harsh and hazardous environments. Additionally, the design of these boots ensures both foot protection and the comfort needed for long-term use.

Footwear Raw Materials:

One of the key advantages of Aran Tejarat is its ability to produce high-quality raw materials for footwear production. These materials include PVC (Polyvinyl Chloride), PU (Polyurethane), and air blowing. These raw materials have properties such as flexibility, lightness, resistance to wear, and long lifespan, and are used in the production of durable sneakers, sandals, slippers, and boots. The use of premium raw materials guarantees the quality and durability of the company's final products.

Technical Features of Products:

- High Flexibility: Aran Tejarat's products are made from high-quality materials that offer excellent flexibility, making them suitable for long-term use.
- Wear Resistance: The soles of the products are designed to be resistant to wear, ensuring a long service life.
- Anti-Slip: The boots and some sports shoes feature anti-slip soles, making them ideal for use in wet and slippery environments.
- Ergonomic Design: The products are ergonomically designed to conform to the natural shape of the foot, helping to reduce fatigue and foot pain while providing greater comfort.

Design and Innovation:

Aran Tejarat is always striving to update its designs and production techniques, offering products that align with the latest global market trends. Utilizing advanced design software and a specialized design team, the company produces modern, attractive, and functional products that appeal to a wide range of preferences in both domestic and international markets.

In summary, the products of Aran Tejarat Company, due to their high-quality construction, use of premium raw materials, and modern, functional designs, are considered one of the ideal choices for consumers in various environments and conditions.
